PROFESSIONAL SUMMARY

VP of Engineering and technology executive with 15+ years of experience leading large-scale engineering organizations through platform modernization while embedding AI into core product capabilities. Track record building and scaling teams up to 60+ people, unifying platform architectures across complex product portfolios, and turning proprietary domain data into AI-driven products that deliver measurable business outcomes. Deep infrastructure and architecture foundations combined with executive-level leadership across product strategy, organizational design, and cross-functional alignment.

PROFESSIONAL EXPERIENCE

VP of Technology

Genial Care – Digital Health Startup

03/2023 – Present

São Paulo, Brazil

- Directed the technical strategy for a 25-person engineering organization building AI-enabled products on top of a proprietary clinical dataset, architecting the data infrastructure to support AI capabilities at the core of the product.
- Built AI-driven assessment and documentation systems leveraging structured clinical data, reducing time-to-intervention from 2 months to 3 days and enabling same-day session documentation across the organization.
- Led clinical product digitization that transformed domain expertise into structured, queryable data powering product intelligence, growing DAU from 20% to 75% and WAU from 35% to 95% in six months while improving clinical operational efficiency by 300%.
- Architected a scheduling system with probabilistic intelligence, increasing clinic occupancy by 70% and improving the prescription scheduling rate by 40 percentage points.
- Redesigned billing around product and AI, reducing the non-receipt rate from 10% to under 1% and materially improving cash-flow predictability.

Head of Technology

Genial Care – Digital Health Startup

12/2020 – 03/2023

São Paulo, Brazil

- Joined at seed stage with full ownership of product, design, engineering, and IT; defined cloud architecture and platform foundations supporting the company's growth and AI strategy.
- Built the technical organization from zero to 25 people across product, engineering, and design with zero voluntary attrition over 2+ years.
- Led product strategy and platform development that directly contributed to a \$10M Series A led by General Catalyst.

Senior Engineering Manager

Creditas – Fintech

02/2020 – 12/2020

São Paulo, Brazil

- Led the creation of the product platform tribe (~60 people, 8 direct reports, 2 staff engineers), the company's most strategic initiative to modernize and unify lending infrastructure across multiple product lines.
- Designed the platform architecture strategy to consolidate duplicated codebases into a shared foundation covering process orchestration, communications, customer profiling, risk analysis, and pricing.
- Executed a digital transformation cell model: embedded platform engineers within product teams to drive incremental migration, delivering business value continuously rather than through big-bang releases.
- Established engineering culture through metrics-driven dashboards, continuous feedback loops, and a shift from feature delivery to genuine product ownership across squads.
- Defined the organizational design of the tribe, structuring multidisciplinary squads aligned to platform domains and coaching engineering managers on technical leadership.

Tech Lead

Creditas – Fintech

04/2017 – 01/2020

São Paulo, Brazil

- Created a new engineering tribe for Creditas's expansion into funding and loan servicing, working directly with the founder to define product vision, technical roadmap, and scalable architecture.
- Owned end-to-end tribe setup: product definition, tech stack, hiring, and culture, establishing a product-minded engineering approach where engineers owned outcomes.
- Drove adoption of TDD, Domain-Driven Design, Clean Architecture, and SOLID principles across the team.

Software Engineer

03/2015 – 04/2017

- Joined as one of the first engineers (~15 employees); designed and built the entire AWS cloud infrastructure from scratch focused on scalability, security, and cost control.
- Built the company’s first data platform and analytics infrastructure, enabling data-driven operational decisions; ran SQL training for the management team to accelerate adoption.
- Led the adoption of DevOps culture and tooling, enabling engineers to manage infrastructure independently as the team scaled.

Software Engineer

06/2011 – 02/2015

boo-box – Ad Tech

São Paulo, Brazil

- Developed backend systems (Ruby, Rails, MySQL, Redis) for a real-time ad platform handling 14,000 req/s with 99.9% uptime. Managed full AWS footprint and infrastructure automation at scale.

Service Desk Analyst

02/2009 – 01/2011

Dimension Data

São Paulo, Brazil

- Managed incident resolution and SLA tracking for national and international clients following ITIL v3 practices.

CORE COMPETENCIES

Leadership & Strategy: Large-Scale Engineering Organization Leadership, Platform Modernization, AI/ML Strategy, Organizational Design, Product-Led Growth, OKR-Driven Execution, Cross-Functional Alignment, Digital Transformation, Board-Level Communication

Technical: Cloud Architecture (AWS), Application Architecture, System Design, AI/ML Product Integration, Data Platform Design, Microservices, Domain-Driven Design, DevOps, Ruby, JavaScript, Python

Methodologies: Data-Driven Product Development, Agile, Product Discovery, Continuous Delivery, TDD

EDUCATION

Bachelor of Computer Science

2009 – 2012

Universidade Paulista (UNIP)

Languages: Portuguese (Native) | English (Full Professional)
